## VISION

OUR VISION IS TO CREATE SOCIETIES FOCUSING ON CONNECTING THE TWO DIVERSE REALITIES (SAFETY AND SECURITY) AS AN INTEGRATED SYSTEM, TAKING TECHNOLOGY IN HARMONY WITH ARCHITECTURAL DESIGN WHICH IS AESTHETICALLY IMPRESSIVE AND HIGHLY FUNCTIONAL.

# MADE IN ITALY

## IMPLEMENTED AROUND THE WORLD!

From the post-World War II era, "Made in Italy" has confirmed itself as a label granting fine quality, authenticity and a sense of style internationally praised. Our company has managed through the decades to create a brand of high value all over the world, mixing the iconic Italian aesthetics with technology and innovation. The worth of the "Made in Italy" has granted our products prosperity in the markets, as it secured the solidity of the national economy.

## WHO ARE WE?

Safety Security Architectural Development (S.S.A.D) provides security solutions comprised of various technologies. We help keep our clients safe while maintaining an artistic taste.

At S.S.A.D, we bridge the gap between architectural design and high-tech security helping maintain the aesthetic sense of your building. Our experience in residence building and commercial towers, gives potential clients the freedom to choose from various options, helping them pick a solution that best suits their need

## WHAT WE DO?

Since its inception, the Company has specialized in the Security and Safety sectors, acquiring high professional skills and becoming one of the most significant and appreciated companies in Italy and abroad in the field of design and technical assistance.

Numerous projects and installations have been carried out at national and international institutions, public administrations and offices of private companies.

## WHAT IS SAFETY?

Safety refers to those rules, procedures and preventive measures which are necessary to make workplaces and construction sites safer. The primary focus is to remove or otherwise minimize workers' exposure to work-related risks and hazards in order to avoid injuries, accidents or contraction of job related/occupational illness.

## WHAT IS SECURITY ?

Security refers to all those measure aimed at protecting personnel, structures and documentation from acts of violent crime or terrorism.

Analisis and classification of FIRE RISKS  
Drafting of the FIRE RISKS assesment document  
Firefighting design.

Evacuation and EMERGENCY Plans.  
Practical Guidelines/exercise for evacuation  
Security Procedures, Operative Procedures.

## MESSAGE FROM THE CEO

Identifying the dangers to which workers are exposed in the workplace, assessing all the risks to their health and safety, implementing and monitoring the effectiveness and efficiency of the Prevention and protection system is now a legal obligation but also and above all the primary objective of our company.

As consultants to Safety, Heads of the Prevention and Protection Service, qualified Trainers and training experts in various areas, We are at your side to offer you the most appropriate organizational and technical solutions for your reality.

As part of **SAFETY**, the company's focus is on the protection of health and safety at work in accordance with the provisions of current regulations. When an accident occurs, bad luck is still heard today. It is an ancient legacy on concepts such as fate, destiny, something inescapable with respect to human intelligence. More correctly, when there is an accident specifically at work or exposure to a risk agent that can produce occupational disease, this is instead caused by failure to comply with safety regulations.

The system of **PREVENTION AND PROTECTION MEASURES** or the set of organizational, procedural, technical and behavioral interventions allow to reduce/ eliminate the RISK ( $R = P \times D$ ) in terms of decreasing the probability of occurrence/reduction of the magnitude of the damage. Identifying the dangers to which workers are exposed in the workplace, assessing and monitoring the effectiveness and efficiency of the Prevention and Protection System is now a legal obligation but also and above all the primary objective of our company. As Safety consultants, Heads of the Prevention and Protection Service, qualified Trainers and training experts in various areas, we are at your side to offer you the most appropriate organizational and technical solutions for your reality

## Safety and Security for Diplomatic and Consular Offices

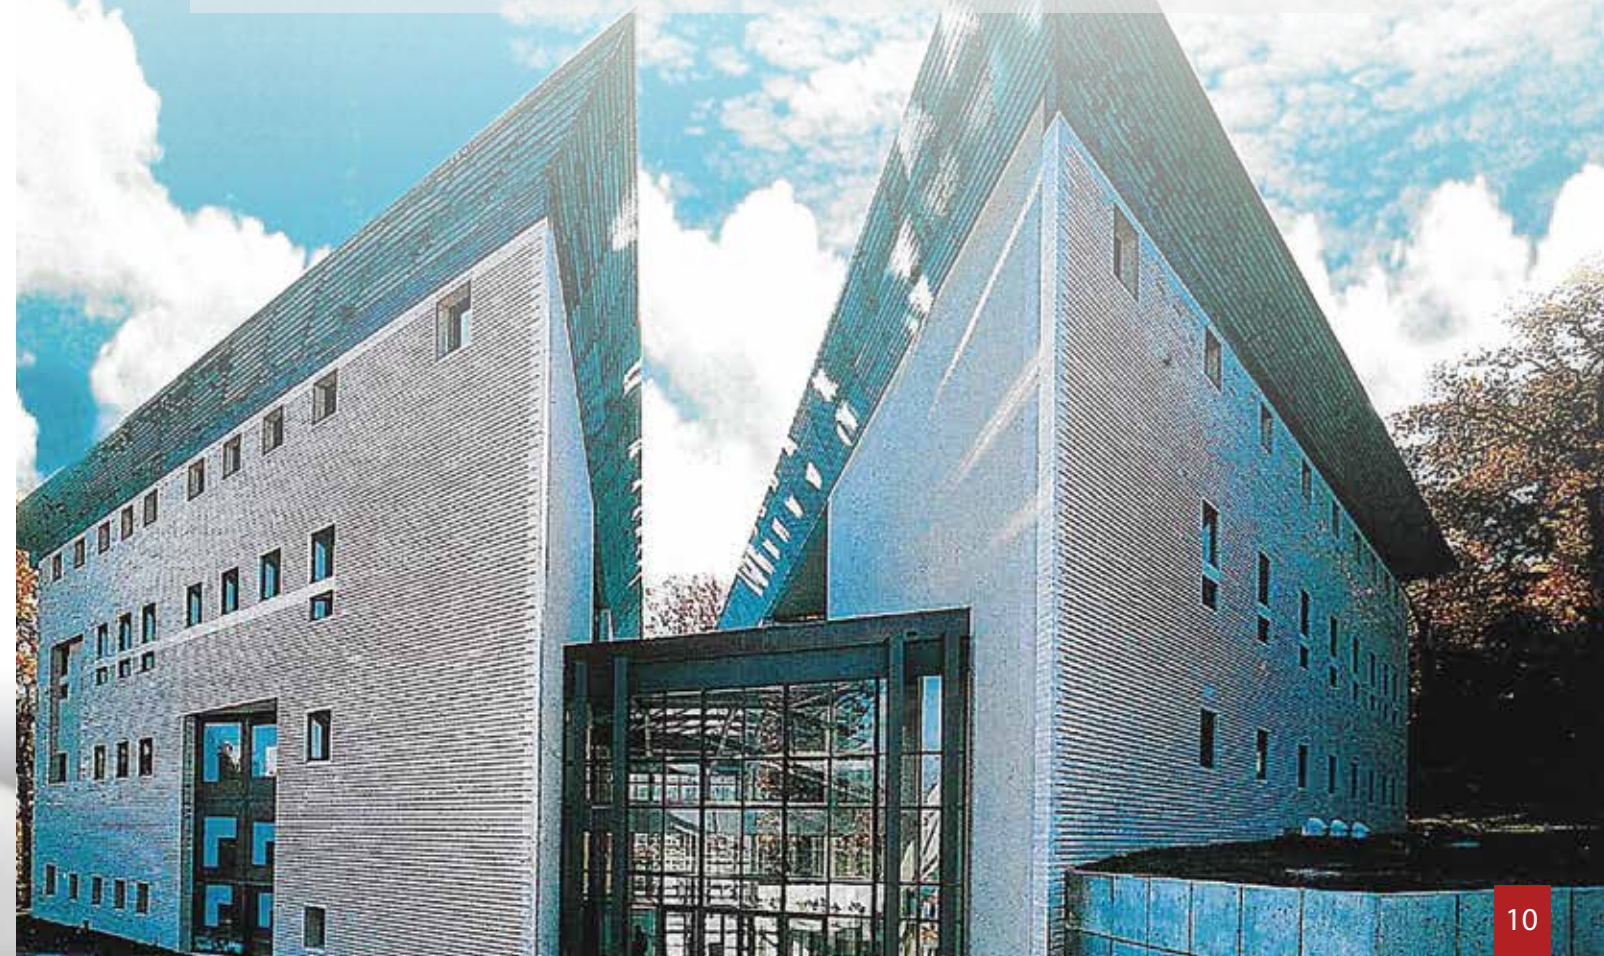

SSAD has its own unique solutions aimed at the Protection of health and safety at work for diplomatic and consular representational offices abroad including the provision of services in high risk countries. This also includes safety and security for personnel and staff posted abroad for short term or long-term missions. The professional services planned and executed by a highly experienced team is linked to the ability to implement both passive (safety) and active protection (security) measures that can guarantee meeting all standards and criteria according to work-place legislations.

SSAD- **SAFETY** is able to offer specialized advisory services on the regulatory implementation of D.lgs. 81/08 and other related regulations in accordance with DM 51 of 16.02.2012, including regulation on the protection of the health and safety of offices abroad under Article 3, paragraph 2, of the Legislative Decree 9 April 2008,81.

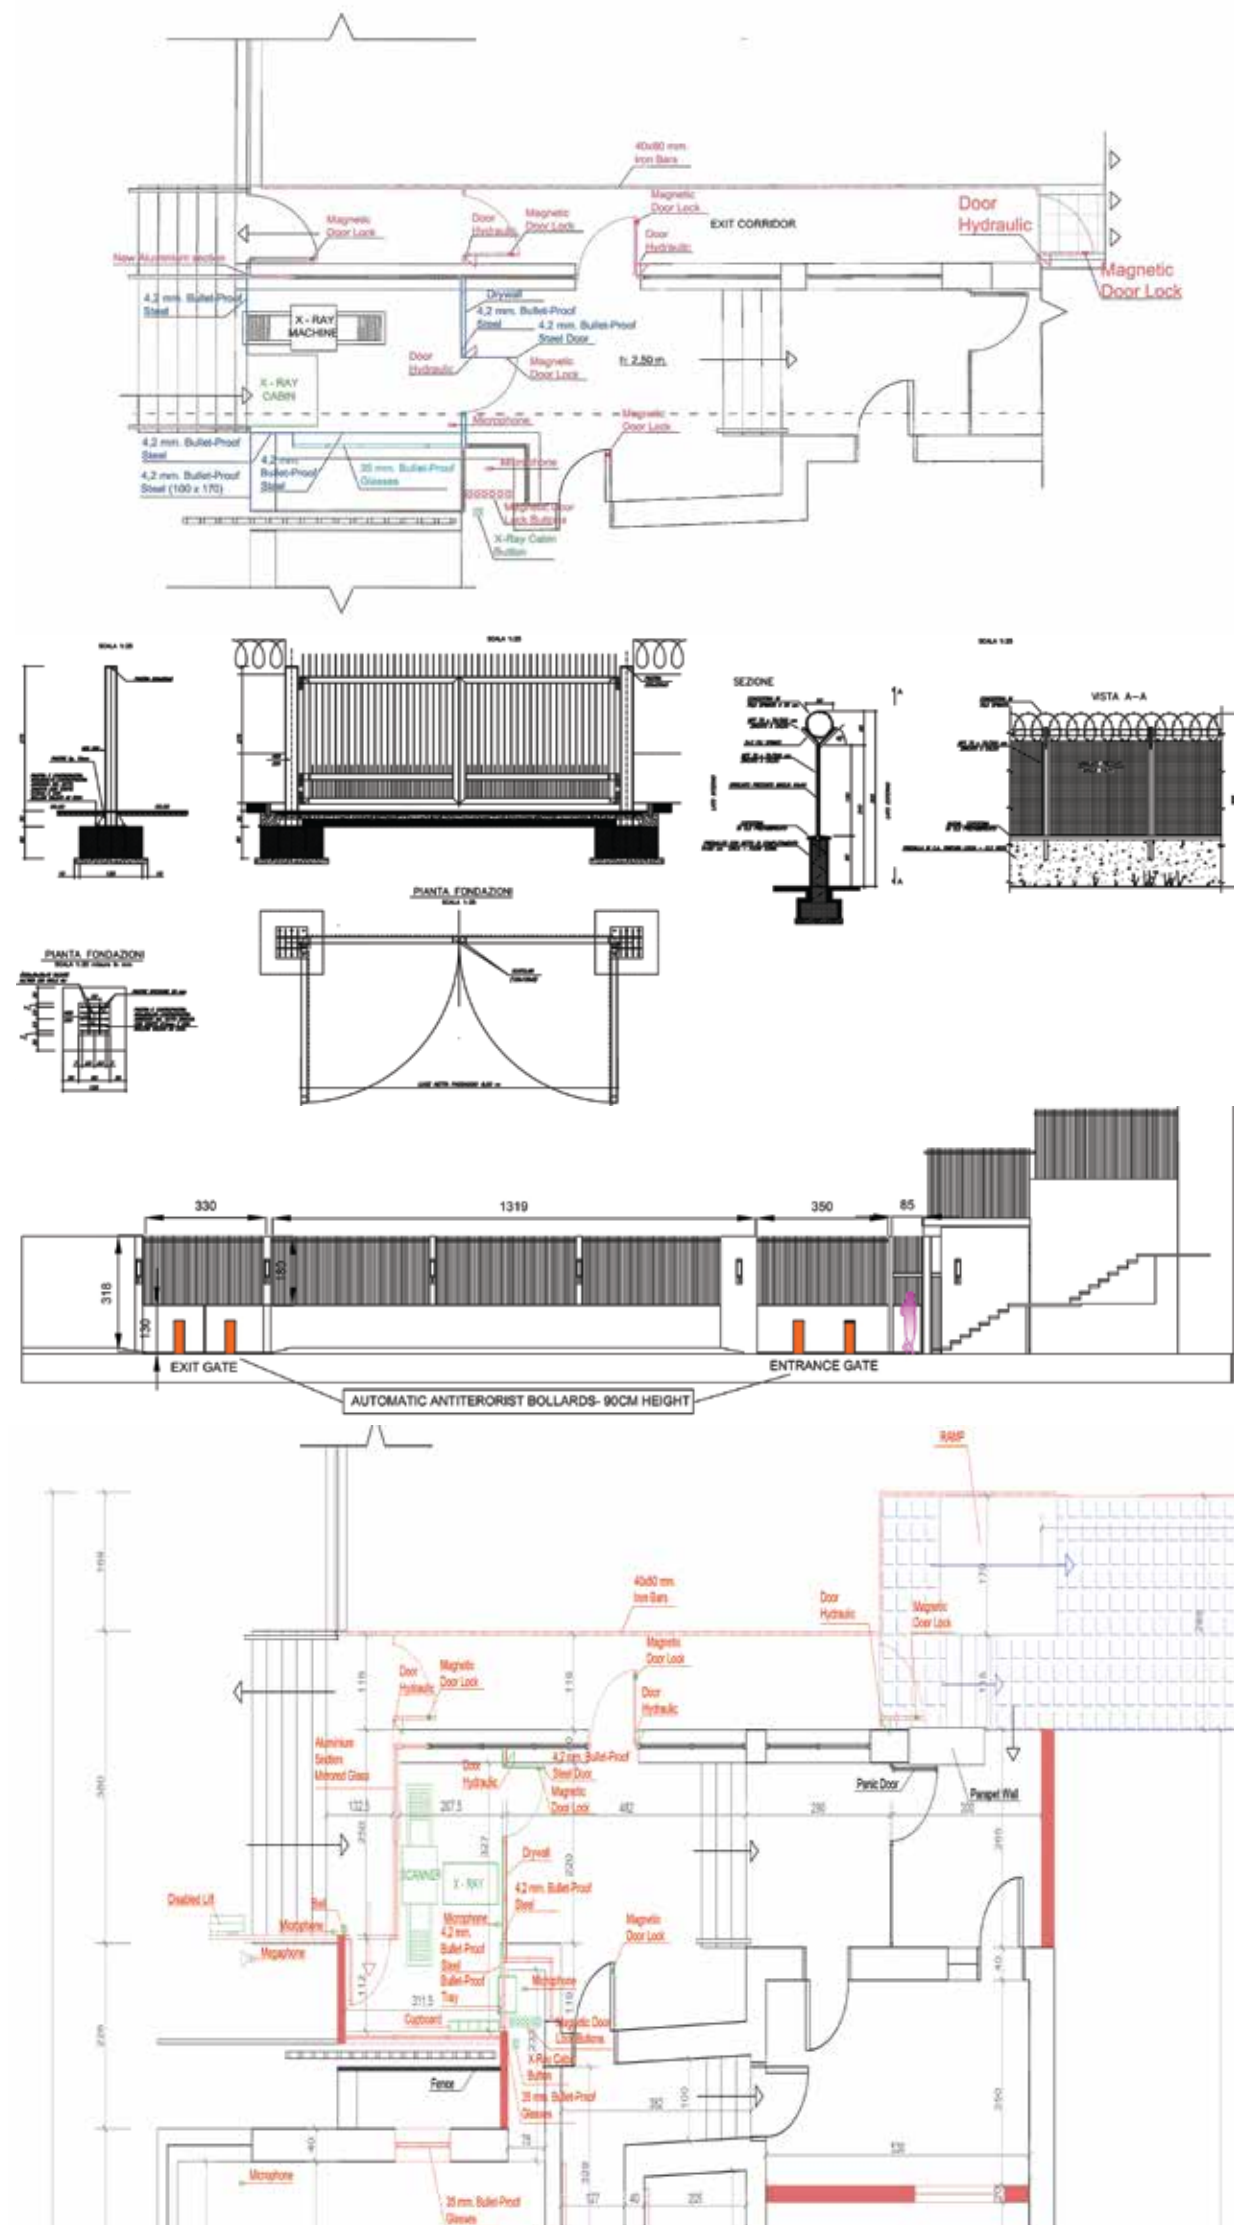

In fact, DM 51/2012 is the legislation that is paramount for all the foreign diplomatic offices to follow especially for the identification of the various obligations applicable from country to country.

A very important point of Regulation 51/2012 reiterates that the application of health and safety rules also considers provisions to protect the safety of state secrecy, the treatment and custody of classified documentation, as well as access to restricted areas and the particular architecture of protected and confidential areas.

This reaffirms the essential link between the world of **SAFETY** and **SECURITY** of which **SSAD** remains, for diplomatic representations abroad, the only solution currently in existence.

## THE SSAD APPROACH TO PROJECTS

- Preliminary assessment
- Risk analysis for the identification of project objectives;
- Analysis of existing security levels;
- Document and site analysis of the site's potential;
- Analysis of the MEP plants (mechanical, electric, plumbing) and fact check;
- Analysis of the needs of the Client and of procedures and related legislations.

## PROJECT DEVELOPMENT

- Definition of organizational, functional and technical choices;
- Design of various levels (concept, detail design, final design) in accordance with the rules in force of technology systems and active safety systems and passive protections customization of any HW and SW components;
- Design and construction of integrated systems (active and passive perimeter protections, fences, access control, detection systems, video surveillance, electronic components, software, anti-intrusion systems, etc.)
- Design and construction of armored structures at various levels of resistance on the basis of what is required;
- Design of confidential areas I and II- classified areas;
- Construction supervision and final test;
- Maintenance of the plants;
- A careful guidance and 'after-care' service that provides all its skills;

Technical resources, sales, production, maintenance, quality, logistics

## DESIGN OF DIPLOMATIC AND CONSULAR REPRESENTATIONS

1. Risk analysis and design of offices (existing or new locations) including active and passive security works with particular reference to counter-terrorism protection measures in accordance with the Guidelines laid down by the Ministry of Foreign Affairs and International Cooperation.

### STRENGTHS

1. High end customers in the Italian and international sector;
2. Collaborations and partnerships with the largest Italian and international companies in the field of security;
3. Deep knowledge of the industry resulting from many years of experience by professionals belonging to the Company;
4. High-level projects carried out over the years to solve the most complex of situations
5. The company is able to design and carry out any type of structural work (in armored C/s and/or masonry) and MEP systems (electric, mechanical, thermal/hydraulic and plumbing) for structures that are particularly sensitive areas.
